

# Correction for Poggi and Richard, “Alternative DNA Structures *In Vivo*: Molecular Evidence and Remaining Questions”

Lucie Poggi,<sup>a,b</sup>  Guy-Franck Richard<sup>b</sup>

<sup>a</sup>Sorbonne Université, Collège Doctoral, Paris, France

<sup>b</sup>Institut Pasteur, CNRS, UMR3525, Paris, France

Volume 85, no. 1, e00110-20, 2021, <https://doi.org/10.1128/MMBR.00110-20>.

Page 6, lines 2 to 3: “In particular, one antibody was raised against telomeric sequence by phage display and was called 1H6” should read “In particular, one antibody was derived from mouse immunization and was called 1H6.”

Page 13, lines 14 to 16: “When 2D3 was tested on synthetic oligonucleotides carrying different lengths of CAG/CTG trinucleotide repeats, it was found that the antibody efficiently bound to heteroduplexes but not to homoduplexes (115)” should read “The 2D3 antibody was tested on CAG/CTG trinucleotide repeats prepared from plasmids carrying DM1 or SCA1 repeats, cloned from patient DNA. The antibody was found to efficiently bind to heteroduplexes but not to linear homoduplex DNA (115).”
